

Felipe Enne Mendes Ribeiro

Full Stack Developer | Node.js, TypeScript, React, Python & APIs

Jacaré/SP • +55 (12) 98300-8732 • felipeenne@gmail.com • [GitHub](#) • [LinkedIn](#) • [Medium](#) • [Portfolio](#)

Full Stack Developer with 5+ years of experience building web applications, REST APIs, internal tools, automations, and integrations using JavaScript, TypeScript, Node.js, React, Python, PostgreSQL, MongoDB, and Salesforce. Experienced in production support, payment flows, log analysis, process automation, and freelance delivery through Workana and independent projects.

Technical Skills

- **Languages:** JavaScript, TypeScript, Python.
- **Backend:** Node.js, Express, REST APIs, external integrations.
- **Frontend:** HTML5, CSS3, Bootstrap, React.
- **Databases:** PostgreSQL, MongoDB.
- **Salesforce:** SOQL, case analysis, integrations, flow investigation and support for internal processes.
- **Testing and Automation:** Jest, Puppeteer, Python scripts.
- **DevOps/Tools:** Docker, Linux, WSL, Git, GitHub, Portainer.
- **Integrations:** Salesforce, Jira, Stripe, Pagar.me.
- **Data:** QlikView, reports, data analysis.

Experience

FREELANCE FULL STACK DEVELOPER - WORKANA / SELF-EMPLOYED - JULY 2026 - PRESENT

- Provide freelance software development services through Workana and independent projects, focused on web applications, REST APIs, integrations, automation, bug fixing, and system improvements.
- Develop solutions using Node.js, TypeScript, React, PostgreSQL, MongoDB, Docker, Git, and API integrations, applying clean code and maintainable delivery practices.
- Communicate directly with clients to clarify requirements, estimate scope, prioritize tasks, and deliver functional software solutions.

FULL STACK DEVELOPER - STAYS - APRIL 2022 - JUNE 2026

- Developed and maintained web applications, REST APIs, internal tools, and backend integrations using JavaScript, Node.js, TypeScript, PostgreSQL, Salesforce, and third-party services.
- Built and supported integrations between internal systems, Salesforce, Conta Azul, Stripe, Pagar.me, and operational platforms, improving data flow reliability and reducing manual work.
- Investigated and resolved production issues by analyzing logs, API responses, Salesforce flows, payment errors, financial integrations, edge cases, and critical business processes.
- Developed internal automations with Puppeteer and Python scripts, collaborating with product, support, operations, and engineering teams to deliver practical improvements.

FULL STACK DEVELOPER - EDSX - NOVEMBER 2021 - FEBRUARY 2022

- Built and maintained full-stack web application features using JavaScript, frontend technologies, backend logic, and API integrations.
- Supported client-facing solutions and blockchain-related research, collaborating with a remote international team and adapting quickly to new technologies.

DATA ANALYST - EMBRAER - JUNE 2021 - NOVEMBER 2021

- Built QlikView dashboards and reports to monitor operational indicators, support internal teams, and improve data-driven decision-making.
- Processed, cleaned, and analyzed operational data, identifying patterns, inconsistencies, and process improvement opportunities.

FULL STACK DEVELOPER - KUADRO - OCTOBER 2020 - JUNE 2021

- Built and maintained internal web applications for educational operations, including frontend/backend features, bug fixes, and system improvements.
- Worked with technical and non-technical stakeholders to understand requirements, define scope, and improve internal tools in a fast-paced edtech environment.

TEACHING ASSISTANT - UNIVERSITY OF SAO PAULO - MARCH 2018 - DECEMBER 2019

- Teaching Assistant in Statistics and Operations Research, supporting students, grading exercises and assisting with distance learning tools.

Education

FULL STACK WEB DEVELOPMENT STUDENT - MICROVERSE - OCTOBER 2019 - JULY 2020

- Intensive full-stack web development program covering Git, HTML/CSS, Ruby, Rails, JavaScript and React. Built group projects, worked through remote pair programming and participated in code reviews.

MASTER'S DEGREE IN LOGISTICS SYSTEMS ENGINEERING - UNIVERSITY OF SÃO PAULO - JANUARY 2018 - JUNE 2020

- Graduate program focused on operations research, simulation, systems analysis and process optimization, applying quantitative methods to data-driven decision-making.

Project Work

GIT HUB ACTIVITY LAKEHOUSE

- Built a local data engineering lakehouse that ingests GH Archive events and transforms them through Bronze, Silver and Gold layers using Python, PySpark, Delta Lake and Docker.
- Implemented data quality checks, automated tests and an interactive Plotly dashboard published with GitHub Pages.
- Access: [GitHub](#) and [Live dashboard](#).

AUDIOBOOK PRODUCTION AUTOMATION PLATFORM

- Personal project for producing and publishing audiobooks at scale on YouTube, using Python, FastAPI, local TTS and the YouTube API to automate audio generation, file organization, thumbnails, descriptions, playlists and scheduled publishing.
- [YouTube — Domínio Público Audiolivros](#).

CLIMBING THE VOLCANO GAME

- 2D game developed with JavaScript and Phaser, including collision logic, item collection, character movement and tests with Jest. The project focused on frontend development practice, programming logic and interactive application structure.
- Access: [GitHub](#) and [Live version](#).
